

BRAVO COMMUNICATIONS, INC.

SURE/FIRE® GROUND TRANSIENT FILTER CORD

Description

Bravo's Sure/Fire Ground Transient Filter Cord (GTFC) is a uniquely designed and patented AC electrical system 10 Amp rated power cord with a built-in "Ground Line" filtering module for AC appliances and systems of all types and applications. The GTFC also includes common mode filtering on hot and neutral lines. Unlike commonly available power conditioners, UPS systems and other power handling devices that cannot filter the AC Ground Safety Line (only hot and neutral), the Bravo GTFC power cord easily replaces existing appliance/system power cords to transparently add complete system protection. Protection is provided against ground line transients, lightning, outsider injected system security threats, and noise disturbances. The GTFC will act as a checkvalve so that no unwanted energy or frequencies are allowed to flow in the reverse direction back up into the protected appliance (your equipment) preserving electrical system integrity and stopping damaging noise as well as any excess electrical energy threat.

This UL/ETL and CSA approved Ground Filter Device/Component has no active or solid state components to fail and has no repetitive wear out mechanism. The Bravo GTFC is recommended for all appliance devices and systems where a power cord rated at 10 Amps or less may be used.

Features

- ◆ Integrated Filtered Power Cord for easy plug and play into your existing appliances /systems such as Security Systems, UPS systems, fire alarm/security panels, POS systems, antenna systems, network servers, process control systems, copiers, PCs and remote sensing equipment.
- ◆ Works with both 60Hz/120V and 50Hz/230V electrical system appliances.
- ◆ UL/ETL and CSA Approved Transparent In-Series Design.
- ◆ Attenuates undesirable wide frequency range above the normal and desired electrical system frequency.
- ◆ Ground Line Bullet Proof Protection .

Benefits

- ◆ Unlimited Application. Dramatically improves AC electrical system performance and integrity stopping unwanted noise, lightning and all damaging electrical transients across the equipment ground plus hot/neutral filtering.
- ◆ Various cord styles are available for worldwide application.
- ◆ Easily inserts in front of existing power cords.
- ◆ Security from outside intruders and electrical system injected security breaches and damaging energy waveforms.
- ◆ Stops system downtime, production losses, system errors and lockups, network problems, and blown equipment.
